A little quality of life: clean drinking water

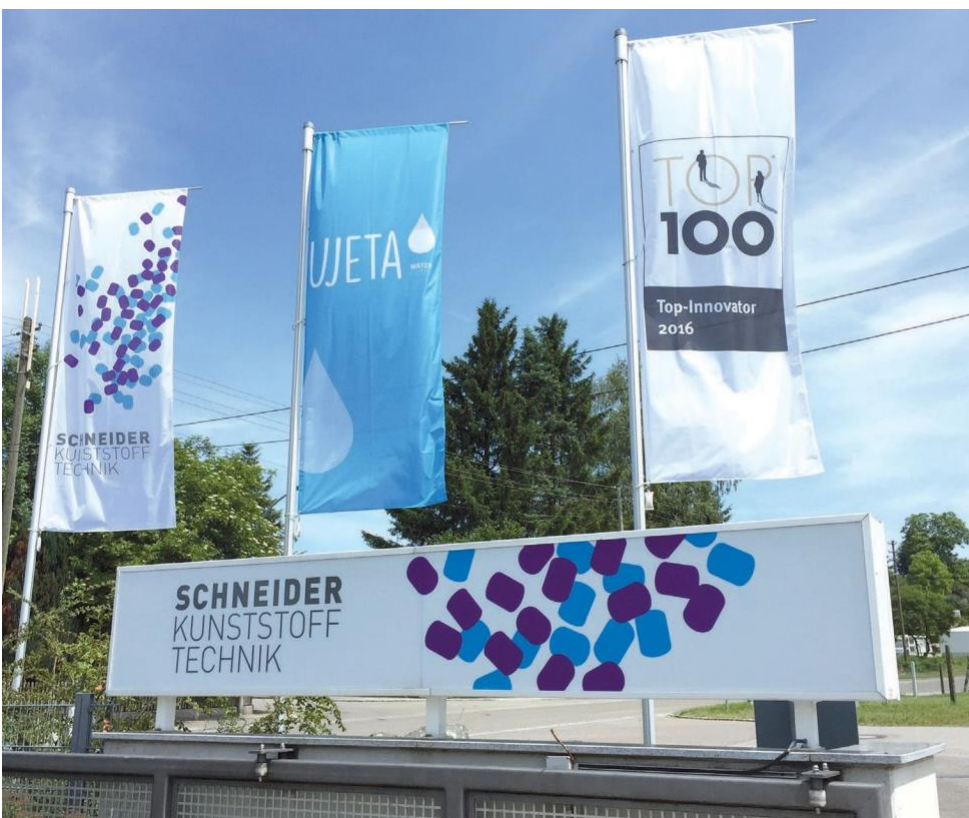

Schneider Kunststoff Technik in Kirchheim

Clean drinking water is a basic need. It is essential to life, and equally part of quality of life. But what happens if you can no longer rely on the supply of drinking water in your home? If you don't know what impact potential germs or chlorine additives might have on your health? In that case, you should get your own reassurance and ensure that you

have the best-quality drinking water at home. How? An Unterallgäu company has the solution: a patented water filter. The UJETA water filter from Kirchheim-based Schneider Kunststofftechnik GmbH reduces/removes 99.9995 per cent of germs, bacteria and other contaminants such as heavy metals (e.g. lead & copper), drug residues, chlorine

products and chlorine decomposition products, pesticides, organic compounds and asbestos fibres – to LOG 6 classification. This is ensured using the best activated-carbon and ultra-sensitive membrane filters. The absorption properties of the activated carbon even filters out heavy metals, chemicals and drug residues. A wide variety of

pesticides and germs of all kinds are also removed. To vitalise the water, every UJETA water filter contains energising crystals. In addition, a special turbulence technology refines the filtered water, rendering it practically like spring water from the tap. Schneider Kunststofftechnik GmbH and its UJETA products was ranked amongst the TOP 100 innovators in the whole of Germany in 2016. And the great thing about this product is that all the installed components are produced in Germany. So it really is MADE in GERMANY. The Türkheim drinking water was tested and subjected to a microbiological examination in an independent laboratory. Unfiltered, the sample did not comply in some areas with the requirements of the German Drinking Water Ordinance. Using the UJETA filter, the laboratory gave it the all-clear – everything complied with the standards. So don't leave the quality of your drinking water to chance, but get some reassurance of your own!
