

## **Part of the innovation elite**

### **Schneider Kunststofftechnik once again in the TOP 100**

Kirchheim - Schneider Kunststofftechnik GmbH, of Kirchheim, Germany, is again one of the innovation elite and has just received a number of honours: the company has won the German Innovation Award and the German Brand Award and is one of the Top 100 Innovators of 2018.

Schneider Kunststofftechnik manufactures technical plastic parts for customers in the automotive, mechanical engineering, packaging systems and sensor technology sectors. In addition to product manufacturing for customers, Schneider Kunststofftechnik also produces and assembles its own products, such as the UJETA water filter. The UJETA filter is one of the smallest and most effective water treatment systems in the world, with an output of up to 5,000 litres per unit. Thanks to combined ultra-filtration using activated carbon and membrane filters, the UJETA Care removes 99.999 per cent of all bacteria and germs along with heavy metals, drug residues, chlorine products, pesticides, organic compounds and asbestos fibres.

All customers benefit from the innovative capacity of Schneider Kunststofftechnik: the company supports its clients all the way from the provision of technical advice through the development of proprietary plastic parts to tool and mould design and construction. Schneider Kunststofftechnik also guarantees flexible production at the highest quality level. The company invested more than 700,000 euros in new manufacturing technology in 2018 alone. All products are manufactured exclusively at the company's head office in Kirchheim, guaranteeing "Made in Germany" quality and safeguarding jobs.

Managing director Drita Schneider attributes the success of the company to the commitment of its workforce: "Free and open discussions and a spirit of partnership are particularly important for a small business such as ours."
